GUITAR/BASS
AMPLIFIERS

GX100 GUITAR AMPLIFIER

The GX100 heads the Ibanez GX series with 100 watts of smooth, clean punch and the most innovative array of features available. The GX100 brings the artist's entire system of instrument, signal processors and amplification under instantaneous and effortless control. The result is a totally new performing experience that liberates the artist's style for its ultimate expression.

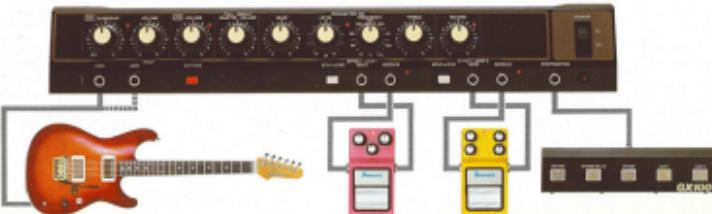

The GX100 features two switch-selectable channels for immediate access to lead and rhythm settings. Channel 1 contains a smooth, sweet overdrive for that most desired of lead sounds and a volume control for level matching with Channel 2. The Master Volume incor-

porates a "Bright" switch for enhanced highs. The advanced equalization circuit provides bass and treble controls along with a switchable semi-parametric mid-range boost/cut for a wide range of tonal colorations. The Reverb section is switchable and provides deep, rich reverb/ban.

The GX100 incorporates two independent effects loops that may be assigned to either input channel and may be individually switched in or out. Along with its high efficiency 12" speaker, the GX100 can drive an external speaker, a line-level output for studio and PA use and headphone for private practice.

To bring its vast capabilities under the artist's command, the GX100 provides the exclusive multi-fotswitch. The multi-fotswitch allows convenient foot control of channel switching, parametric EQ switching, Reverb switching and individual effects loop switching. Thus, the musician is in command of his entire system. The multi-fotswitch uses whisper-quiet FET switching and requires only a standard coaxial "guitar cord" for connection with the GX100.

The GX100 from Ibanez-high quality and exclusive features make it truly the standard of the 80's.

GX20 GUITAR AMPLIFIER

The GX20 is the perfect amp for those who want big-amp performance and features in a down-sized combo. The GX20 packs 20 watts of power in a package that is rock solid and ready for the road.

The GX20 provides Overdrive and Normal inputs with individual level controls and Master Volume for a wide range of sounds from smooth rhythm to sizzling leads. The tone section contains treble, middle and bass controls and the Reverb delivers that "big room" sound. The GX20 also provides an extension speaker jack, a line-level output for PA and studio use, and a headphone driver for practice. The GX20 can be integrated into larger systems or used alone for practice, pre-performance tuning or hotel room jams. The GX20 from Ibanez-don't hit the road without it.

GX30 GUITAR AMPLIFIER

The GX30 provides 30 watts of clean, driving power and features found on combos costing much more. The input section features a switchable overdrive, clean channel level and Master Volume with Bright switch for easy access of lead and rhythm sounds. The tone section provides control of treble, middle and bass response. The Reverb control adjusts a wide range of reverb accents. The high efficiency 10" speaker handles every nuance of the 30 watts.

The GX30 provides high and low input jacks, a line-level output for studio and PA use, an extension speaker jack and a headphone driver for private practice. Ruggedly built, the GX30 from Ibanez can take the rigors of the road and provide consistent, high quality performance for stage and studio.

GX60 GUITAR AMPLIFIER

The GX60 is a full featured, 60 watt combo that lets the artist customize their amp to suit his needs. The input section provides clean-channel gain along with switchable overdrive for instant access to a ringing lead sound. The Master Volume incorporates a "Bright" switch for added highs. The tone section contains treble and bass controls and a semi-parametric mid-range boost/cut section for a wide range of tonal possibilities. The reverb of the GX60 is lush and full.

The GX60 provides high and low input jacks, a line-level output, a "Main In" jack for use with an external power source or other program source, and a headphone driver for private practice. The Overdrive may be switched on via the front panel or by remote footswitch, and the Reverb is also footswitch controlled. The GX60 uses a full range 12" speaker and is housed in an attractive, rugged cabinet for years of reliable performance.

The GX60 from Ibanez-a unique combination of features and performance unmatched by any combo in its class.

GX40B BASS AMPLIFIER

The GX40B provides the sound and features of larger systems and the convenience of a down-sized combo. The 40 watts of the GX40B drives a newly designed high efficiency 12" speaker in a bass reflex cabinet of unusual response.

The GX40B features high and low input jacks with level control, primary tone control with bass, middle and treble, and a fully parametric EQ system for accents or custom tailoring of the sound. The parametric EQ is footswitch controllable for instant access. The GX40B also features a line-level output for PA and studio use and a headphone driver for private practice.

The GX40B is built for years of reliable service on the road, stage or studio. The GX40B from Ibanez-hearing is believing.

GX60B BASS AMPLIFIER

The GX60B is the bass combo with features found only on separate systems. A truly professional amplifier, the GX60B provides a smooth 60 watts through a ported cabinet with a special design heavy duty 15" driver.

The electronics of the GX60B features high and low level inputs with Volume control, a primary tone section with bass, middle and treble controls, a fully parametric EQ for infinite tonal possibilities, and an exclusive compressor/limiter section for tailored attack and level control. The compressor/limiter may be set via the front panel or by an optional footswitch, and the parametric EQ is footswitch controllable. The GX60B also provides a line-level output and a headphone driver for private practice and tuning.

The GX60B is ruggedly constructed and is provided with removable heavy duty casters. The GX60B from Ibanez-the bass combo with the rock system sound.
