

ADVANCING THE ART OF CHORUS PROCESSING

Ibanez advances one of the most popular effects of all time. The CCL Dual Chorus provides two separate control settings that can be "preset" and "called back" at will. With the ability to instantly change from one sound to the next, you can add a new, dynamic quality to your solos and rhythm work.

Preset section "A" on the CCL has been optimized for lush chorus applications: rich sounding rhythms, accented leads -- the tasty, classic stereo chorus sounds. Preset section "B" features expanded control for a wider range of distinct time-delay effects: specialized chorus, true vibrato, and classic flanging effects -- from sweet and mild to intensely ringing flanges. Select just the sounds you need.

The CCL makes it easy to get your sounds quickly and reliably. Simply use the three-way slide switch along with the on-board footswitch, or use the optional footswitch input and put both "preset selection" and "active/bypass function" under footswitch control. Either way, the CCL puts your sounds where you need them. WHEN you need them.

The CCL advances the art of chorus processing with quiet analog circuitry and today's most desired features -- features that are "friendly" as well as functional. The CCL from Ibanez will show you how easy it is to advance the art of your sound!

■ SPECIFICATIONS

DELAY TIME	A: 32 msec - 85 msec B: 1.3 msec - 6.4 msec
SWEEP SPEED RANGE	A: 0.6 Hz - 6.0 Hz B: 0.025 Hz - 0.63 Hz
MAXIMUM INPUT LEVEL	+4 dBu
GAIN	0 dB
EQUIVALENT INPUT NOISE	-100 dBu (HF-A)
INPUT IMPEDANCE	500 Kohms
OUTPUT IMPEDANCE	LESS THAN 10 Kohms (STEREO)
POWER SUPPLY	ONE 9V BATTERY OR EXTERNAL AC ADAPTER (9V)
SIZE	(126D) x (70W) x (54H) mm
WEIGHT	450g

DIGITAL MODULATION DELAY

DML

The Ibanez DML is a multi-function digital delay with some very special features. The DML, along with over 500 ms of delay time, has a modulation function to create chorus, flanging, doubling and echo effects. The DML features a variety of signal controls. Along with Delay Time and Delay Range, there's Speed, Width, Echo Repeat and Delay Level. A wide 12KHz bandwidth makes the DML a complete, full range effect. The DML Digital Modulation Delay.....
Compact and Dependable.
