it can't be stopped.
it can't be contained.
only you can control it.

AMPLIFIERS

weapons grade amplification
The new 120-watt Thermion features only the finest top-shelf, military-grade components... all in the service of a design that
considers every aspect of modern playing from tone to transport.
But the most important spec is this: Thermion is all-tube. There
is absolutely no wimpy solid-state circuitry in the signal path.
So you’ve got the tones, power and control you need to con-
cquer every album track, every stage, every city, and ultimately,
the entire universe (admittedly, that may take a little time).

1. **TN120 THERMI**on™ Ibanez All-Tube Amplifier
   - 120W TWIN Outputs (40W/40W/40W) + 15W
   - All-tube amplifier with six vacuum tubes
   - Ultra-lightweight solid-state circuitry
   - Four Blackout Matched Ruby Tubes™ output tubes (user switchable)
   - 4 x 12AX7A-selected Ruby Tubes™ preamp tubes
   - 800W input protection switch
   - Two independent channels: Vintage Channel & Hot Channel
   - Tube circuit effects loop send/return/return to control the front panel and controls on the rear panel.
   - Illuminated front panel and illuminated iB vitamin plate.
   - Switching system reveals different distinctive characteristics out of the box.
   - Three-position bright switch in vintage channel

2. **TN121A THERMI**on™ traditional angled guitar speaker cabinet
   - 4 x 12” Celestion Vintage 30™ speaker drivers
   - 5/8” Birch plywood protects durability and durability of the speaker cabinet
   - Noiseless electronics: noiseless transformers
   - Separate left and right channels eliminate acoustic interference
   - Two-1/2” large, heavy-duty amp-in-cab drivers
   - Adjustable 1.5” black plastic-protected stainless steel corners and additional front angle cabinets (TN121C)
   - 15”-durable cone soft speaker housing, 1”-durable cone soft speaker housing, 8”-durable cone soft speaker housing,
   - 8”-durable cone soft speaker housing, 8”-durable cone soft speaker housing

3. **Matched RUBY Tube** output tubes are used for optimum performance and stability.

5. Heavy-duty Thermion cabinets feature 5/8” plywood diaphragm; two fully isolated left and right channels provide enhanced channel performance and tube performance when used for the same studio.

6. Often imitated, never duplicated, Celestion® Vintage 30™ are the industry-standard heavy-duty speakers. Another example of the Thermion commitment to using only the best components.

7. Bias adjustment allows easy biasing and changing of tubes to approximate the same sound as the previous
   tubes without removing the chassis. (Should be performed by qualified personnel only)

8. Bottom-heavy, high-fidelity output transformers provide the accurate high-end spikes and full line-out required by modern players and often achieved by many tube amplifiers.
Vintage is not spoken on these pages. Ibanez amps are spec’d and voiced for today, tomorrow and beyond. Our combination of tonally versatile active eqs, maximum features for minimum bucks, and speakers specifically voiced for each amp continues to win accolades from Guitar World, Guitar One and Guitar Player Magazines (including an Editor's Pick for our TB25 half-stack). That’s why Ibanez continues to be the fastest growing line of amplification.

**Co-Axial Speaker System**
Coaxial speakers on the SW20 and SW35 feature a tweeter mounted in the center of the speaker’s cone, providing a more efficient sound. This design avoids having a particular "hot spot" or "sweet spot" as often found in separate speaker/tweeter setups. It provides a full-width sound image for accurate, natural reproduction. The SW20 features a Fugue/10 coaxial speaker (250W at 8Ω), while the SW35 is equipped with the Fugue/15 (400W at 8Ω). The SW35 also includes a 3-Way 15" speaker switch to accommodate different types of music and playing styles.
