 BKS150 Bag for PMK400, PMK300, PMK300, PMK400, PMK300 and PMK300

FEATURES

MEMORY KEY LOCK

The key lock is the final step in securing the desired position. After the outside mount is locked, the key lock easily slips into it's locking channel, thus doubling the anti-slip protection. (Pat.pend.)

NON SLIP

The support arms employ a 360 degree, two point locking concept. This, plus the allen nut grip locking system, provides absolute security. (Pat.pend.)

ASSURED SECURITY

The fact that the support arm is braced on the opposite side as well, the heaviest of keyboards can be supported. The support arms can slide easily, meaning there's no limit to where they are placed on the bar unit. The user is guaranteed of secure and safe mounting. Any amount of support arms can be attached.

ONE TOUCH BRACE

The one touch leg supports provide one more assurance of rigidity in setting up the stand. These supports, like the bar units and support arms, are easily adjustable to any demands placed upon them. (Pat.pend.)
