FEATURES

SHELL INTERIOR

*WOOD FINISH
SWINGSTAR's SS8000 series features a new direction in drum shell construction. By using two different woods for the make-up of this shell, a uniquely powerful and warm sound is created. The SS8000 series shells have a finished interior of natural wood. The sound and appearance is strictly professional and first class.

*ZOLA-COAT
Zola-coat is used for the drum shell interior on SS7000 series drums and drum sets. By sealing or coating the interior of the drum shell with zola-coat, the shell is immune to any temperature or humidity changes. A quality and consistent sound is available under any conditions.

DRUM HEAD
SWINGSTAR's SS7000 and SS8000 series are equipped with Pinstripe drum heads on the batter side and TAMA clear heads on the bottom side. The snare drum features a Weather-King coated head on the batter side and a Weather-King transparent snare head on the bottom. All bass drums have TAMA black head with white TAMA logo.

TOM HOLDER
The TAMA OmniLock tom holder found on the TAMA Artstar and Superstar drums is now part of the SWINGSTAR SS8000 series. The strength and flexibility of the OmniLock holder make it strictly a piece of professional gear. One Touch operation allows for quick and effortless setup. The SS7000 series has as standard equipment the TAMA Omni-Sphere tom holder that allows you easy and stable setup.

CYMBAL STAND
A cymbal stand's construction is not only for appearance and strength. The stand should also complement the acoustic sound of the cymbal. TAMA's cymbal stands are made of the finest grade steel tubing and assembled for a well-balanced operation. The SS8000 series offers double braced leg cymbal stands that provide the maximum stability, visual excitement and cymbal sound enhancement.
