The Omni-Tune Lug and Omni-Tune Drum Key allow you to tune both the top head and bottom head from the batter side. The Omni-Tune system expands and improves on the lug system invented in 1930 by drum designer William David Gladstone, which he created for snare drums. Starclassic Bubinga Omni-Tune features the Omni-Tune lug on every drum so the entire set benefits from faster, easier and more precise tuning.

Tuning Both Heads From The Batter Side

To tighten the bottom head from the batter side, you simply turn Tension Bolt A counterclockwise using the square head key. To tighten the batter head from the batter side, you turn Tension Bolt B clockwise using the hex head key.

Tuning The Bottom Head From The Bottom Side

The bottom head can also be tuned from the bottom side in the traditional fashion, by turning Tension Bolt A' counterclockwise using the hex head key.

STARCLASSIC MAPLE

In the '80s TAMA's Superstars and Imperialstars reigned supreme – the perfect drums for the times. The next challenge for the TAMA designers? To transcend the trends... to achieve timelessness...by building drums that perfectly translated the individuality of a player's artistry, beyond genre, style, mood, or technique. Starclassic Maple drums are that achievement...and the spark that lit the thin-shell revolution.

S Shell Kit

The distinct and traditional sound of Birch has made it the choice of many pro drummers for the last 30 years. But TAMA believes it's time to take Birch in an entirely different direction. By using Bubinga wood for the inner layers of a Birch shell, TAMA has created a mixture that provides a new sound with a sweeter and deeper tone. This combination exhibits the focused attack of Birch along with the enhanced lows of Bubinga.

Silverstar drums are designed and built to capture the essence of the vintage kits we love from the 60's and 70's, but upgraded with features and functionality that rival today's most expensive boutique brands. TAMA quality Birch shells, precision tooled triple-flanged hoops, and a smart new Star-mount system, give Silverstar full, rich open tone, and sharply defined attack that cuts through the mix whether on stage or in the studio. Silverstar also integrates a number of unique hardware advantages, like a sliding-base tom mount system that makes tom positioning faster to locate and easier to lockdown for your ideal setup. Available in a wide range of sizes, finishes, and configurations, Silverstar is for the player who loves vintage tone and style, but needs mechanical dependability—all at a surprisingly affordable price.

Which is why TAMA has the set you need, want, and can afford no matter how long you've been playing drums or what budget you have to work with. TAMA launched the most affordable kit to ever incorporate so many high-end features – Imperialstar. Every aspect of the modern drum kit was exhaustively examined, reexamined, and then improved before it was accepted as part of the Imperialstar design. That's why, if you start playing Imperialstar drums now as a beginner, you'll still be enjoying them when you've achieved pro status.

S.L.P. - SOUND LAB PROJECT SNARE DRUMS

The snare drum is the keystone of any drummer's sound. At some point in the musical journey, the player will embark on a search for the perfect drum to enhance his or her sound. With that player in mind, we created the S.L.P. series.

TAMA's extensive research and development process led to a varied offering of S.L.P. shell materials. Thickness and the specific parts were experimented with to find each shell material's full sonic potential.

BACKBEAT BUBINGA BIRCH

Combining Birch and Bubinga is one of TAMA's signature sound recipes. Now, this proven hybrid is available in the Sound Lab Project snare line. Baring a beautiful exterior ply of naturally finished white oak, the S.L.P. Backbeat makes a stunning centerpiece. But the drum's best qualities are its rich dark tonality, derived from its three plies of Bubinga, and the solid crack and projection of four plies of Birch.

STARPHONIC SNARE DRUMS

Solid sound; full projection; rich, resonant tone; tight, crisp snare response...these were the objectives we strived for in creating Starphonic drums. In order to achieve this, we developed a concept that incorporates entirely new hoop, lug, and strainer designs, combined with a variety of uniquely constructed drum shells. STARPHONIC snare drums are the result of three years of detailed research and precise testing.

A symphony of sound springs to life from each STARPHONIC drum as a result of its own unique naturally resonant shell material, Super Sensitive Hi-Carbon Snappy Snare wires, and a specially designed Grooved Hoop.

IRON COBRA DRUM PEDALS

IRON COBRA 900 SERIES

Suitable for any music situation and style, Iron Cobra drum pedals were created based on three key principles: Smoothness, Stability, and Adjustability. Smooth action eliminates player stress and facilitates acceleration; stability assures consistent, reliable, pedal performance, and durability; and adjustability enables a drummer to adjust the pedal's many features according to their personal playing characteristics and preferences. The Iron Cobra has continued to evolve under these guiding principles for the past 20 years, and remains one of the most celebrated and esteemed bass drum pedals today.

FLEXI GLIDE CAM

IRON COBRA 600 SERIES

The newest addition to the Iron Cobra series, the Iron Cobra 600's most unique feature is a reversible cam called the "Duo Glide Cam." A simple adjustment allows fast changes between a true round "Rolling Glide" sprocket and an offset "Power Glide" sprocket. Drummers can choose the appropriate cam based on playing style, musical environment, and personal preference. In addition, the Iron Cobra 600 features a newly designed hinge for precise footboard action, and ball bearing equipped "Speedo-Ring" rocker cam.

Duo Glide

The Duo Glide cam makes it easy to switch between the Power Glide cam, which increases power and speed during a pedal stroke, and the Rolling Glide cam, which provides a smooth, consistent feel throughout the stroke.

Offered under license from Pearl, U.S.Pat.6,172,291

Double Chain Drive

The Iron Cobra 600 series features the same durable double chain drive as the Iron Cobra 900 series. This double chain drive offers smooth and accurate motion in any situation.

Newly Designed Hinge

This new hinge uses a tough, cylindrical brass sleeve to protect the hinge pin from damage or undo pressure, assuring fluid motion and increased durability.

Speedo-Ring

The Iron Cobra 600 series eliminates another source of friction by replacing the traditional nylon rocker cam with the Speedo-Ring, which has a high quality ball bearing built in.

- Spring Tension Adjustment
- Beater Angle Adjustment
- Dual Sided Beater

IRON COBRA 200 SERIES

The Iron Cobra 200 series was developed using the same design principles as the Iron Cobra 900 series, and offers remarkable performance at an affordable price. The Power Glide cam provides a smooth, light feel without sacrificing power or speed. Both the HP200P and HP200PTW can be fitted with TAMA's Cobra Coil for an even faster footboard return.

SPEED COBRA DRUM PEDALS

Over the years, one of the greatest challenges facing drum pedal manufacturers has been to provide a pedal that “does it all,” or at the very least, focuses on the most critical features that drummers absolutely demand to enhance their performance... a difficult task, by any means. By today's standards, the two most important features drummers look for are speed and power. With most pedals, if you adjust the action to address speed, you can sometimes lose power. Conversely, if you focus primarily on the power of the pedal's stroke, you sometimes lose the desired speed. Now, the rules have changed. TAMA's Speed Cobra not only delivers pure raw aggression and power, but lightening fast speed!

STANDARD DRUM PEDAL

The HP30 utilizes the same offset cam design as the Iron Cobra Power Glide. The offset cam offers increased power and speed as the beater reaches the end of the stroke. The beater angle can easily be adjusted: a feature usually found only on more expensive pedals. The DS30 beater offers two different sounds: rotating the beater head, you can choose between felt for a softer controlled sound, or plastic for a louder and punchier sound with more attack.

STRAIGHT CYMBAL STANDS

FEATURES

**Quick-Set Tilter****Quick-Set Tilter**

(US.PAT.NO.7385127)

TAMA's patented toothless Quick-Set Tilter marks another Tama advancement in hardware. Relying on basic principles of physics, the Quick-Set Tilter holds its position using the friction of six smooth metal disc plates instead of traditional toothed gears, so you can adjust it to any desired angle. This mechanism also has a more durable structure than a conventional gear tilter.

**Quick-Set Cymbal Mate****Quick-Set Cymbal Mate**

(US.PAT.NO.7629526)

By simply gripping and pressing the two buttons on the both sides, users can attach and remove the Cymbal Mate with just one touch, making cymbals setup/breakdown a snap. Like our standard Cymbal Mate: fine adjustments to the cymbal's swinging motion can be made by rotating the unit.

POWER TOWER SYSTEM

Easy setup, easy breakdown, and easy replication—this was the basis for the renewal of our Power Tower System. Guidelines on both straight and curved pipes help you set curved pipes horizontally, a task that's typically one of the toughest parts of setting up drum racks. New, modified rack clamps enable fast easy setup by hand and use of a simple tuning key. Plus, using the stickers provided with your Power Tower System, you can mark pipe joints and clamps, making it easy to reproduce your rack setup whenever you want. With all these features and more, the new Power Tower System makes it quick and easy to achieve your ideal setup, time after time.

SPECIFICATIONS

Vertical Pipe Guide

Curved markings on vertical pipes, every 50mm, allow for easy and precise positioning of horizontal pipes.

Horizontal Pipe Guide

Use this center mark on horizontal pipes to line up J30TS clamps. This will ensure that the angle of all toms and cymbals mounted on the horizontal pipe are consistent.

Memory Stickers

All units include a sheet, which includes stickers numbered 1-10, and lettered A-Z. You can apply these to clamps, brackets, and pipes to for easy, on-the-spot setup.
