

Ibanez Performer Series

SMOOTH TUNER II MACHINE HEADS

The close tolerance gears are housed in die cast alloy housings for long life and durability. Smooth Tuner II's also feature individual tension adjustment.

WIDE VARIETY OF CONSTRUCTION

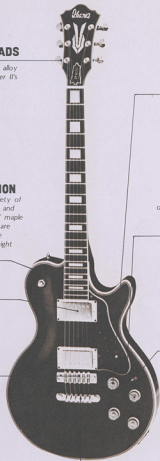

The Performer Series is available with a wide variety of construction features. The bodies are mahogany and available with birch, curly maple, or carved solid maple tops. Both detachable and built in maple necks are available. A full selection of finishes, including the Ibanez exclusive Antique Violin, Amber and Midnight Olive, are available.

SUPER 70 PICKUPS

The newest and most powerful 70 series pickup we've ever made. Super 70's have earned a reputation for higher output than most humbuckings but with a clear, full tone, without muddy midrange or loss of highs.

GIBRALTAR BRIDGE

Just set the height and lock the bridge rock solid at any height. The extra long intonation adjustment length accommodates any string gauge you might use. The Gibraltar bridge is the most solid and stable adjustable bridge in guitardom.

SURE-GRIP™ KNOBS

The contoured sides fit your fingers naturally and the ribbed rubber insert gives you a sure grip. The numbers are large and easy to read for quick, accurate referencing.

CUSTOM DESIGN POTENTIOMETERS

Most manufacturers use an "off the shelf" potentiometer, but none of the available pots have the correct taper for guitar pickups. We've researched the field thoroughly and designed a pot that's smooth and evenly graduated from "0" to "10".

IBANEZ TRI-SOUND™

PF300 and PF400 feature the special design Super 70 Tri-Sound pickup mounted in the fingerboard position. Controlled by a mini three position switch, this pickup can be used as either a standard humbucking, single coil, or reverse phased twin coil pickup. This added versatility puts a world of tones right at your fingertips.

QUIK-CHANGE™ TAILPIECE

The unique angled slots permit fast string changes and still allow the proper amount of down pressure on the strings. The tailpiece itself is die cast from a heavy zinc alloy for increased mass at the string anchor point.

Model No. PF400

PERFORMER SERIES FEATURES
