# PATCH CORDS

## MAKE YOUR CONNECTION!

While everyone offers long guitar cables, few offer those much needed short patch cables. New Ibanez has two different configurations that will cover most applications.

## WHY USE SHORT PATCH CABLES?

Most musical instruments and accessories are high impedance devices. When sending high impedance signals over long cable runs (over 25 feet) a loss in high and low frequency response occurs. Therefore it makes sense to your sound to use short patch cables when using a series of effects in a chain.

## MODEL No. 215 - 6 inches short

The Ibanez Model 215 patch cable is specifically designed for connecting effects pedals. The two right angle plugs allow you to place your effects side by side as close as you wish.

Model 215

Model 217

## MODEL No. 217 - 18 inches short

The Ibanez Model 217 is designed to be used with rack mounted effects and other applications where a slightly longer cable run is necessary to make the connection. The Model 217 features two reinforced straight metal ends.

## MODEL No. 4566... MALE & MALE PLUG

This plug can be connected two cables, terminated with phone extension jack.
