

Just Plug in and Play.

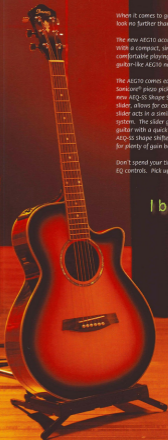

When it comes to great acoustic electric sound for live performance, look no further than the AEG10 acoustic-electric.

The new AEG10 acoustic-electric was designed for the stage in mind. With a compact, single cutaway body, the AEG10 allows for comfortable playing in almost any situation. The slim, electric guitar-like AEG10 neck is designed for fast, easy action.

The AEG10 comes equipped with the highly regarded Fishman® Sonecore® piezo pickup and AEQ-SS shape shifter preamp. The brand new AEQ-SS Shape Shifter preamp features a unique tone shaper slider, allows for easy and effective tone adjustment. The tone shaper slider acts in a similar manner to the loudness control on a stereo system. The slider gives the player broad control over the tone of the guitar with a quick and simple slide lever adjustment. The low noise, AEQ-SS shape shifter preamp has plenty of headroom, which allows for plenty of gain before distortion sets in.

Don't spend your time on stage messing with knobs and complicated EQ controls. Pick up an AEG10 and just plug in and play.

AEQ-SS SHAPE SHIFTER EQ

The new Ibanez AEQ-SS shape shifter preamp was specifically designed to work with the Fishman® Sonicore® pickup, and features a tone shaper that's much like the loudness contour on your stereo. The AEQ-SS's tone shaper is an actual loudness contour control with an additional slide control on the normal 3-band EQ controls so you can exactly determine the level of the contour and get the right sound. Quickly. The Shape shifter is also very quiet. And it has a huge amount of headroom so you can get more volume before distortion sets in. It also features a phase reverse switch for eliminating feedback and a low battery light (which won't be very often because the AEQ-SS circuitry promotes long battery life.)
