

TAMA TRAINING PAD STAND

INSTRUCTION MANUAL

■ Please read through this instruction manual before start to use.

Thank you for purchasing a TAMA product. In order to take full advantage of this product's functionality and to ensure safe enjoyment, please read this manual carefully before use, and keep it in a safe place for future reference.

1. Assembly

1-1. Extend the tripod at the base of the stand; then insert the upper tube and tighten the T-bolt (a) to fasten it (Fig.1).

1-2. Extend the arms and place the practice pad on them. Then rotate the plastic arm adjustment nut counterclockwise (as seen from above) to fix the pad in place. Adjust the tilter angle so that the pad is at the desired angle.

2. When using a small pad (between 6" and 8")

If you're using a small-sized pad (between 6" and 8"), reposition the rubber cushions attached to the tip of each arm by rotating them 180 degrees from the state shown in photo 2 to the state shown in photo 3. This will allow the cushions to hold the pad at a more appropriate angle.

3. Extension Pipe (EP222: sold separately)

By attaching the EP222 extension pipe, you can practice in the standing position. When the EP222 is attached, the height increases from approximately 200mm (7 5/16") to 350mm (13 3/4") higher than with the standard size pipe.

■ When using a 8 to 10 inch diameter pad.

■ When using a 6 to 8 inch diameter pad.
